

Managing Process Water at Ready Mixed Concrete Plants - A Manual for Best Practices

A manual developed by members of the California Construction & Industrial Materials Association (CalCIMA)
in conjunction with the State Water Resources Control Board.

Table of Contents

Chapter	Title	Page
1.	Introduction	1
2	Operational Processes	7
	Illustration – process flow diagram	29
3	Potential Pollutants	31
4.	Regulatory Framework	45
5.	Best Management Practices (BMP)	63
	5.1 Water Balance Evaluation	65
	5.2 Process Water Reuse	79
	5.3 Weired Process Water Basin	85
	5.4 Schmutz Drying Pad/Basin Cleanout	91
	5.5 Discharge to Local POTW	97
	5.6 Process Water Segregation – permanent	101
	5.7 Process Water Segregation – temporary	111
	5.8 Storm Water Utilization	119
	5.9 Bio-Filtration Basins	123
	5.10 Mixer Truck Water Use	137
	5.11 Mixer Truck Washout	141
	5.12 Rock Out of Mixer Truck Drums	145
	5.13 Returned Concrete Windrow	149
	5.14 Reclaiming Systems	153
	5.15 Returned Concrete Rubble Pile	157
	5.16 Formed Concrete Products	163 (Inc)
	5.17 Inspection & Maintenance	165
	5.18 Housekeeping	169
	5.19 Training	175

Appendices

Appendix	Page
# 1 Glossary	167
# 2 Water Balance Evaluation – spreadsheet	177
# 3 “Recycled Water in Ready Mixed Concrete Operations,” by Colin Lobo and Gary Mullings, National Ready Mixed Concrete Association (NRMCA)	195
# 4 “Retention of Ready Mix Process Water,” by Bill Kane, Kane GeoTech, Inc., March 2007	215
# 5 “Results of Concrete Washwater Pond Sampling and Analysis: CMAC Member Sites, Central Valley, CA,” by Bill Walker, Walker & Associates, Inc., June 2006	255
# 6 “Prototypical Retention Sump Design,” by Carlton Engineering, Inc., March 2008.	317
# 7 Regulatory History	327
